

It is very important to us at HCLC to keep our barn as clean and healthy as we can, therefore we require all horses arrive in our facility current on deworming and all required vaccinations. Horses are required to have been dewormed two weeks before arrival and to have had a flu-rhino shot within the last 6 months.

Deworming-

For easy record keeping we have included to the right, one brand's recommendations for a deworming schedule. It is very important to rotate your dewormers active ingredients every couple of months. The easiest way to remember when you dewormed your horse is to deworm them every time you have their feet trimmed, about every 6-8 weeks.

Vaccinations-

Twice a year, in April and October, HCLC has a vet clinic in the barn. The vets trip charge is reduced for all participants. This is the time to get your bi-annual shots administered, and get any other procedures done, including having your horses teeth floated, or just questions and concerns answered by the vet. In order to maintain the health of our horses, we also require that all horses continue to be regularly dewormed and vaccinated once arriving in our facility.

Please let us know if you have any questions regarding our policy!
